

My GitHub Pages Website

A simple, responsive website built with HTML and CSS.

Features

- Single HTML file with embedded CSS for easy deployment
- Responsive design that works on mobile and desktop devices
- Navigation menu with anchor links
- Sections for Home, About, Services, and Contact
- Contact form (note: form submission requires additional backend processing)

How to Use

1. Fork this repository
2. Enable GitHub Pages in the repository settings
3. Your website is now live at [https://\[your-username\].github.io/\[repository-name\]/](https://[your-username].github.io/[repository-name]/)

Customization

Feel free to modify the content, colors, and styling to match your preferences. All the code is contained in the single index.html file, making it easy to edit.
